KOSTIANTYN TYTARENKO

Senior Full-Stack / Product Engineer

kos.tytarenko@gmail.com | LinkedIn | GitHub

Ukraine (EET/EEST) — Remote · EU working hours · B2B/Contract

SUMMARY

Senior Full-Stack Engineer with 9+ years of experience across payment platforms, healthtech systems, and cross-platform consumer products. I turn ambiguous requirements into reliable software and own delivery from architecture and estimates through release and long-term support. Deepest in TypeScript, Vue/Nuxt, Node.js, and PostgreSQL; open to Senior product roles, remote within EU hours.

CORE SKILLS

Frontend: TypeScript, JavaScript, Vue 3, Nuxt, React, accessibility, Web Vitals

Backend & Data: Node.js, Nitro, PostgreSQL, Supabase, REST APIs, OAuth/JWT, payments, webhooks

Infrastructure & Operations: AWS S3/CloudFront, Supabase Cloud, Docker, GitHub Actions CI/CD, Sentry, structured logging, health checks

Testing: Vitest, Jest, Playwright, 20+ critical E2E scenarios, release verification

Mobile: Capacitor, shared web/iOS/Android product architecture, store releases

AI-agent workflows: Codex, Claude Code, scoped delegation, parallel agents, spec-driven implementation, automated verification

Languages: English (B1 — routine work conversations, technical documentation, and async written communication), Ukrainian and Russian (Native)

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer · Full-time

June 2021 — Present

The Cookie Labs — Remote · Digital product studio serving EU NGOs, healthtech, and consumer brands

- Owned architecture, estimates, delivery risk, and release decisions across 30+ launches and up to 4 parallel projects; 27 of 29 tracked milestones shipped within approved delivery hours.
- Led 3–5 engineers and mentored 3 to independent feature ownership; review standards cut median pull-request turnaround from 2.0 to 0.9 business days.
- Built PostgreSQL/Supabase data models and Nitro/Node.js payment endpoints with idempotency keys, transactions, and replay-safe webhooks.
- Improved selected high-traffic pages from 3.8s to 2.1s LCP and raised Lighthouse performance scores from 62 to 90 through rendering, asset, and AWS S3/CloudFront delivery optimizations.
- Shipped the freii product to web, iOS, and Android with 85% shared Vue/Nuxt code, halving cross-platform feature effort versus separate implementations.
- Introduced AI-agent workflows for scoped implementation, parallel analysis, and automated verification while retaining mandatory human review and release accountability.

Vue 3 · Nuxt · React · Nitro · TypeScript · Node.js · PostgreSQL · Supabase · Docker

Full-Stack Engineer · Contract / Part-time

December 2019 — October 2024

Upstaff — Primary contract, later part-time

- Expanded from Vue frontend ownership on an internal operations platform to cross-stack delivery of the public product with WordPress as its CMS.
- Built Chrome extensions and browser automation tools, and delivered backend features with Python and PostgreSQL.
- Owned performance, technical SEO, and reproducible Docker delivery across the product.

Vue · WordPress · PHP · Python · PostgreSQL · Docker

PROFESSIONAL EXPERIENCE — CONTINUED

Full-Stack Engineer · Part-time

November 2018 — October 2019

DMD Binary — Concurrent with JetBrain

- Delivered customer-facing Vue and PHP features across Raffall, SHS100, and partner client products.

Raffall ↗ SHS100 ↗

Full-Stack Engineer (WordPress) · Full-time

June 2017 — August 2019

JetBrain

- Delivered 10+ production websites and introduced Vue.js interfaces backed by WordPress REST APIs.

SELECTED ENGINEERING CASES

Donation Checkout & Backend Integration

25k/year · 8× campaign peaks

- Challenge — multiple brands and providers needed accessible checkout and reliable transaction-status synchronization.
- Architecture — separated Nuxt UI from Nitro/Node.js endpoints; used server validation, database transactions, and unique provider-event records.
- Reliability — made webhooks idempotent and replay-safe, normalized provider states, and automated 20+ payment and failure scenarios.
- Result — processed 25,000 annual donations for 6+ organizations and 8× campaign traffic spikes without duplicate state transitions; support incidents fell 38% within 12 months.

Cross-Platform Consumer Product

Web · iOS · Android

- Challenge — ship one consistent product across three platforms without three separate implementations.
- Decision — chose Capacitor over separate native apps to reuse Vue/Nuxt domain logic, API access, state, and UI.
- Trade-off — accepted an adapter boundary for native plugins, platform configuration, and store releases.
- Result — 85% shared code serves all three platforms and halved cross-platform feature delivery effort, while retaining room for native exceptions.
